9. Validating course contents based on the expectations of epistemic communities, professional associations and of potential employers related to the field of study.

- language policies at the global and European level are trying to meet the increased needs of a labour market and internationalized scientific research, so foreign languages for academic study and for specific purposes are represented at the level of many academic centres in Romania (in vocational fields such as business, law, medicine, computer science, tourism, but also in lectures on scientific discourse in various fields - chemistry, physics, education, socio-human and communication sciences, etc.). See the departmental chairs and language centres in Bucharest, Timisoara, Iasi, Tirgu-Mures, Alba Iulia, Oradea etc from abroad (especially academic study skills and socio-professional communication), where all universities have specialized centres in the practical aspects of specialized discourse, playing an essential role in the formation of instructional and academic culture. For example: Harvard, Washington, North Carolina, Southampton, Dartmouth, Essex, Leeds, Graz, Central European University, etc.
- the teaching content develops the skills and abilities necessary for students' study and academic research skills under the conditions of the internationalization of the university education
- the content of the teaching covers the main practical aspects in which students can be expected to use English in their future profession.
